# Project Chat Server -Group 2

Story -The Story is about the description and basic flow of Chat server Application

User operates the Chat Server Linux

Story Starts

User tries to connect to the server by logging in to the server.

If User is not validated, he gets to register in the server with password.

When user logins it is shown on server side and on the client side with the name of the client.

Clients can look at the active user list.

Client can send and receive messages to different clients connected to the server.

When User/Client Exits the Server, a message is send that the User Has Left.
